

INSTRUMENTATION & PROCESS AUTOMATION CAREER OPPORTUNITIES

INSTRUMENTATION & PROCESS AUTOMATION CAREER OPPORTUNITIES

The CPCA promotes the industry and its members to Canadian customers, academia and public bodies; provides a forum to exchange technical, industrial, and regulatory information; develops Canadian industrial statistics and encourages professional and ethical behaviour and quality standards among its members.

The only association for the instrumentation and automation industry in Canada, the Canadian Process Control Association is comprised of members involved in the development, production, sales and service of process control and automation products and systems. From manufacturers to distributors, publications to service providers, CPCA members include some of the most influential process automation companies in the world.

Sales careers are vastly different from those of the past. Today's instrumentation sales professional undergoes continuous training to maintain their technical knowledge at the highest level. You build relationships with customers, becoming more of a consultant to help them solve problems and provide solutions.

To automate your plant, you need to measure. To measure, you need instrumentation. You will be exposed to different industries, applications and a wide range of leading edge technologies. As an example, the Environmental Science industry is a large user of instrumentation which is used to provide better water treatment technologies to reduce pollution and to provide safe drinking water to millions of people each day.

Why work in the Process Automation field?

- **First field to be exposed to new technology**
 - **Exposed to a wide range of technologies and manufacturing processes**
- **National and International travel opportunities**
 - **Offers a wide range of career options, from the technical side to the business side**
- **Help companies to lessen their impact on the Environment**
 - **Influence technical and regulatory agencies on policy and standards**
- **Many opportunities for advancement**

Necessary skills in addition to technical ability and education that the Process Automation field is looking for.

- **Communication Skills**
- **Customer service orientation**
- **Desire for continued growth**
- **Organizational Skills**
- **Continuous learning**
